

# Top 8 Cyber Attacks 2024 and how to mitigate with XoT technology

# Top 8 cyberattacks in 2024 (1/2)\*

## Expected attacks and how to mitigate with XoT technology

### Phishing Attack

Using deceptive emails, websites or applications to obtain sensitive information

### REDUCING DAMAGE

Will not stop the actual attack but will significantly reduce effects and lateral movements

### Ransomware

Using malware to lock down data or a device through encryption

### REDUCING DAMAGE

Will not stop the actual attack but will significantly reduce effects and lateral movements

### Denial of Service (DoS)

Overloading a machine or a network so that it stops functioning

### BLOCKING TRAFFIC

Protects the device or system from DoS attacks and makes them invisible to outsiders

### Man-in-the-middle

Manipulating communication between two parties without being noticed

### SECURE TRAFFIC

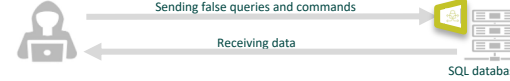

Stops the attack as all traffic is encrypted and a hacker cannot see the devices or systems

# Top 8 cyberattacks in 2024 (2/2)\*

## Expected attacks and how to mitigate with XoT technology

### SQL Injection

Obtain access to the database through false communication / data

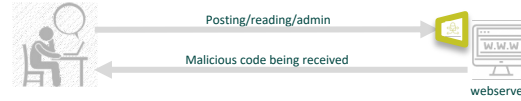

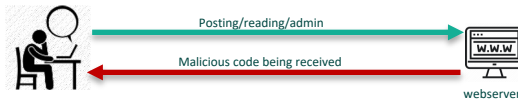

### ACCESS CONTROL

No queries will reach the SQL database other than from trusted users

### Cross-site Scripting

Infect websites to send malicious code to end-users

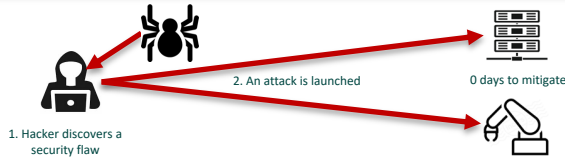

### AUTHENTICATION

Stops any attacks from unknown or unauthorised users

### Zero-day-Exploits

Using unknown vulnerabilities before fixes are available

### ACCESS CONTROL

Devices and systems are invisible to attackers and cannot be reached by unauthorised users

### DNS spoofing

Using DNS queries to direct traffic to fake and malicious sites

### ACCESS CONTROL

Only trusted users can access the DNS server
